

## ATV-UTV CV AXLES

TrakMotive CV Axles for ATVs, UTVs, and Side-by-Sides are engineered from the ground up to be the highest quality, most reliable, and toughest CV axles on the market.

### TrakMotive OE Replacement CV Axles

- ▶ Handles up to 20% more torque than OE axles (torque measured at axle breakage during testing)
- ▶ Heat treated chrome steel solid center shaft
- ▶ High quality neoprene (CR rubber) dust boots (greater flexibility as well as heat and chemical resistance than original equipment boots)
- ▶ High performance moly grease in all axle joints rated to 180°C / 356°F (moly grease provides better metal adhesion and resistance to high shock loads)
- ▶ Meets all original equipment specifications for travel and joint articulation

### TrakMotive Heavy Duty CV Axles

- ▶ Handles up to 35% more torque than OE axles (torque measured at axle breakage during testing)
- ▶ High strength chrome moly solid steel center shaft (higher density and strength than carbon or chrome steel)
- ▶ Superior quality thermoplastic elastomer dust boots (TPE boots are stronger, more rigid, and offer increased resistance to puncture)
- ▶ High performance / high temp moly grease in all axle joints rated to 200°C / 392°F (provides superior protection against high speed racing and competition abuse)
- ▶ Meets OE travel specifications and exceeds OE joint articulation specifications by up to 5 degrees
