Save labor Time and Money

Don't waste valuable shop time or customer downtime disassembling and repairing a worn driveshaft assembly. Fix it right the first time! Replace the entire assembly versus just replacing worn components, which typically only address the symptom and not the root cause.

Additionally, it's critical essential delivery vehicles are repaired quickly to minimize prolonged downtime that can well exceed the price of the repair.

Premium forged u-joints provide maintenance free life and can handle higher torque loads

Premium durable coating protects shaft from premature corrosion

Thermoplastic elastomer (TPE) dust boots provide better resistance to deformation, debris, oils, heat cycling and ozone compared to neoprene boots

Stainless steel band clamps provide better resistance to deformation and stretching

All units are 100% machine balanced to ensure trouble free service life from vibration and noise

U-Joint cups are packed with premium lithium grease providing better lubrication and resistance to extreme temperatures

Special low friction sliding joint spline coating extends service life and eliminates movement that causes clunking noises
