

Monobloc Tube Constant Velocity Drive Axle

DESIGNED FOR SMOOTH, QUIET
OPERATION IN TIGHT SPACES

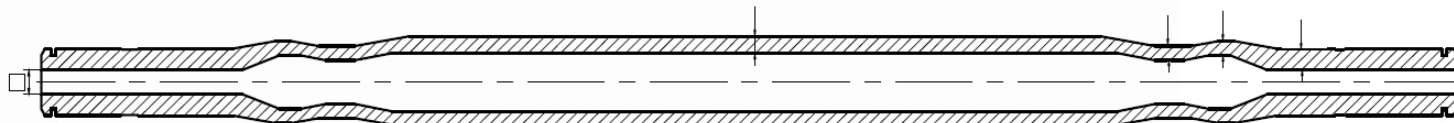

TrakMotive's New Monobloc Tube OE Innovations CV Axles are designed with the latest in axle technology including OE applications requiring one-piece monobloc center bars. The monobloc tube design greatly reduces NVH (noise, vibration, and harshness) and provides the same quiet, smooth operation as the OE design.

Now Available!

Bulletin 112022

Provides improved strength in a smaller, lighter diameter bar, allowing the shaft to fit into smaller spaces where a larger traditional tube shaft would not have room.

Precisely profiled to cancel out harmonic frequencies specific to a particular vehicle to greatly reduce NVH

OE Fit, Form, and Function

FIT Are Specifically designed for applications where new technology is required for fitment.

FORM Provide an OE solution on late model vehicles to reduce concerns and questions.

FUNCTION Operate like the OE axle providing the same driving feel and standards for NVH.
