

Let's Take a Closer Look at TrakMotive HD Xtreme™ CV Axles for Extreme Environments

Bulletin 062024

PROBLEM:

Extreme weather and rugged conditions can be tough on today's vehicles. OE style CV axles function well in normal conditions but can be subject to premature failure due to extreme cold, heat and rugged conditions.

SOLUTION:

TrakMotive® HD Xtreme™ CV Axles are specifically designed to handle the rugged driving conditions even in the most extreme environments.

KEY BENEFITS:

- **Stainless Steel Clamps** provide improved clamping force on the TPE boot to create a tighter, more reliable seal in the most extreme temperatures.
- **Premium Thermoplastic Elastomer (TPE) Boots** provide added protection against road debris and ice, while also being able to withstand exposure to extreme temperatures ranging from -58°F/50°C to +478°F/ 248°C.
- **Specially Formulated 7023B Grease** is designed to resist loss of lubricity and maintain OE lubricant performance in even the most severe temperatures ranging from -40°F/C to +280°F/140 °C.
- **Special High Strength 8-Ball* Outer Joints** are engineered to reduce friction and wear characteristics for greater longevity and cooler operation which extends grease life.
