CV AXLES

BLACK LINE™

Establishing the NEW Standard in Premium

At TrakMotive, **we're obsessed with CV Axle innovation**. This obsession drives us to continuously engineer greater **performance, precision, and protection** into every product we make.

The new **TrakMotive Black Line** represents the next evolution of that commitment. Black Line CV Axles perform better, install easier, and last longer — with a distinct, premium black finish that signals quality and strength while **increasing satisfaction and reducing comebacks**.

Key Features

1. Chemically Bonded Phosphate Surface

Benefit: A true chemical reaction forms a phosphate layer within the metal, not on top of it. This provides up to 10x greater corrosion and chemical resistance.

2. NEW EnduraFlex™ Boot Material

Benefit: Provides improved resistance and flexibility for up to 2x longer life, with superior ozone and temperature resistance (-40°F to 176°F).

3. Premium Hardware in Every Box

Benefit: No more reusing compromised fasteners. All Black Line CV Axles include corrosion-resistant, OE-spec hardware to ensure fit, enhance installation, and reduce future hardware related failure.
